

Meet **intuitive** technology.

At BaySaver Technologies, our engineers are known for simplifying designs and throwing a little common sense into the mix to help solve your stormwater treatment problems.

We call it “intuitive technology.” It’s what gives our innovative new BayFilter the greatest flow rate per cartridge in the industry (30 gpm) and allows it to remove more than 80% of sediment with a d_{50} of 23.2 microns.

Okay, maybe BayFilter won’t be the prettiest piece of equipment on the truck, but with its self-cleaning hydrodynamic backwash, lowest

life cycle costs anywhere, and its industry leading 300 lbs of sediment treatment capacity per cartridge, we don’t even think you’ll notice.

That’s BayFilter. And that’s why we choose the word *intuitive* to describe it.
